

Re: Clarity Call Confirmation – Wednesday 20th May 2026 @ 6pm UK @May 20, 2026 6:54 PM

Notes

Executive Summary

- **Context:** Networking call between Jimmy (data/AI consultant, Berlin) and Michelle (community builder/connector, London)
- **Jimmy's situation:** Building an AI/data consultancy, still in validation stage; planning to relocate (Dubai/Singapore) after German naturalization; unclear on target market
- **Core bottleneck:** Validating whether enough paying customers exist for his offering
- **Key market insight from Michelle:** UK has *high demand, low supply* for credible AI service providers — opposite of Berlin (high supply, low demand)
- **Two main UK client archetypes identified:**
 - Entrepreneurs buying failing businesses → want AI to cut staffing costs (e.g. AI marketing consultant bot, 100–200K budget)
 - Solopreneurs/e-commerce sellers (esp. TikTok) → want workflow automation (emails, CRM, social media replies)
- **Tactical recommendations for Jimmy:**
 - Target LinkedIn real estate/property flippers as likely AI buyers
 - Michelle will gift 2 months of LinkedIn Sales Navigator
 - Connect with Damian (Productivity Beers London) — startup/entrepreneur community

- Consider a separate phone for TikTok research (Jimmy wary of Chinese surveillance)
- **Jimmy's self-identified gap:** Technical skills are solid; needs marketing/distribution muscle — open to agency, co-founder, or collaboration
- **Potential warm lead:** Michelle has a wealthy London client still looking for an AI agent builder; will intro when Jimmy is ready

Appendix

Hello Jimmy, how are you?

Hi Michelle, I I wasn't expecting you to be even earlier than to plan the time.

No, I like to be Yeah, I like to be early. They say the early bird catches the worm.

Indeed. Indeed.

So, how was your day today? First of all,

I would say it's a bit packed. Probably the packed days I have I have had for a while. And let's see. This is like the the third call I have today. One, two, three.

Oh,

wait. One, two, Yeah, the fourth. Sorry, fourth.

Fourth. So, it's a a very productive day.

Hopefully productive. Pack doesn't necessarily translate into productive, but hopefully yes. Hopefully.

It's been a lovely day for me as well in London. Like right now, it's a bit sunny, although it was raining earlier today. So, I'm in a very good mood.

Oh, yeah. I mean, same here. I managed to steal a little bit of time today to go to work out before um Yeah, before my between meetings actually. So I'm still in an Australian rush at the moment. So

that's good.

Cool. So yes, I checked out your website and um to be honest, you've pretty much explained things very well in the last event that we had, the networking event.

Oh, okay.

So yeah, so data and AI, you know, uh consultancy.

Yep. And I actually think I am I'm not not fully done yet because there's also

things I'm building like for example the tooling I'm I'm building and I manage to share this with the other uh small business and they don't necessarily feel they u I mean they don't feel they need hire consultants I still I'm still feeling it's okay if they could manage themself they could also just use my tools for free ideally speaking they they pay me ideally speaking or they also contribute the same tool uh but that is um that is completely fine for me as well and there's also the other things like thought leadership. Um this is also something I'm doing on the side. Uh but I'm not making it very um how do I put it very visible at the moment. Uh but I would say in the compared to the core business of data/ AI consultancy those are very nice to have uh very secondary very very very uh useful nice to have um but still not the primary thing to focus here.

Okay. So okay so before I ask uh really quickly what the primary uh focus is when it comes to AI and you said uh AI consultancy. So are you able to assist companies with um creating certain systems that involve AI?

Mhm. So um here's the thing uh because I am I have actually attended the second the second time of your of your seminar and session and so on. So I have a brief understanding of the of your proposed idea of how to draft uh uh how to translate a business idea into a business plan. And did I miss anything else? Hold on, let me let me check my notes. Hold on. Um ah yeah, there's also someone in the in the sessions shared something very useful in terms of the competitive intelligence uh and pricing analysis uh prompt. Uh I'm Muhammad.

Yeah, probably I'm not sure. Um so yeah, basically I'm trying to use the resources I have to build it already while I could go through the business idea I have uh what I'm really bumping into um I would say a bottleneck here is actually the validations uh part which is which I think is is a good problem to have here is at least I know what is the primary pain point to gain better clarity of my business idea um because um uh essentially I'm at the at the stage of okay I I think I know what I want to do and I build a website to to cover what I want to do but the most critical part here is the validation of this business idea uh first of all are there enough people having this problem Uh and second is are they already paying for a solution or are they willing to pay for it? Uh can you solve it legally is a rather straightforward thing. It's definitely legally yes. Uh but the primary problem I have here is the validation of the of the business idea and can it turn into a profit profitable business. I I think I'm I'm I'm stuck at this

moment actually.

Oh sorry one moment upstairs please. Sorry it's just my son. Um upstairs Okay, he's gone upstairs. Um, okay. So, you want to validate your business idea and just to be clear, when it comes to your business idea, it's all about assisting.

Sorry, one moment. One moment.

Sure. Sure.

My son My apologies. Sorry. Um

I know how hard it is to be a mom. I know.

So you have a bit. So your problem, right? Okay. So before we go on to the problem and how we can like just ideas in terms of how you can validate the business idea.

The reason why I'm sharing this with you. Okay. So last year a gentleman reached out to me. He is a a high netw worth individual in uh London. He's based in London.

And um he purchased a marketing agency and the clients that they work they work with

I mean they're paying like for a strategy 5K for um someone to come and film 20K.

He's Yeah. The agency that he purchased, they basically serve those types of client. So, very much in the corporate world here in the UK.

And um he reached out to me last year because he said he purchased the business because it was failing and um he wants to cut costs. So, he wanted someone to create um an AI assistant

uh that would act as a um a marketing consultant.

So, individuals would call up

and they would be speaking to this consultant but it would be very realistic and he said yeah he was

sens could you further elaborate

oh realistic so for I don't know if it I'm sure it's probably like this in Germany but here in the UK at present you call up some you call up banks

and you have AI speaking to you as if it's a real person hey can I get your number

hey so he wanted

something like like that

but it wouldn't be used for customer service purposes. It would be a marketing consultant.

Okay. Okay.

And he wanted to work with a company where it would be an so they would not only create it but it would be work on a continual basis because this company would need to feed

that AI agent.

Yeah. So

yep

the um the issue I had and and money was not not an issue with this gentleman. But the issue I had was finding people who could do it and find there were a lot of people who said that they could do it but wasn't really sure. So I ended up saying to him, you know what, I don't know anyone right now,

but when I know someone and I'm confident that they can do it, I can connect the two of you. And he said, "Thank you for being honest, Michelle. Some people would have taken my money and said that they could do it and not do it." So he was like, "Thank you. you. Um, so yeah, so that's just something to put out there if I mean obviously right now you're in the validation stage and where your business is concerned, but if you do get to that point where you do think when you where you can do things like that, not only can I introduce you to him, but I'm sure he can introduce you to some other individuals in his network of people

because yeah, a lot of these higherups, they're looking for stuff like that.

They're looking for ways to cut down on uh costs. as it relates to staffing.

Mhm. Understand? And uh I mean a very simple question here is as long as they have enough documentation as in clearly written framework for example I'm sure for consultancy and marketing agency they would have a lot of playbook and a framework like decision framework like uh um maybe a quadr of of decision making and um and how to score certain decision. As long as they have this kind of documentation that should be doable and it should not be too hard. either of course there may be some very specific um needs once the prototype is being built and definitely definitely the client would have we have we have things saying like hey okay looks good and can we add some more and can we change a little bit or maybe change color or okay I don't like the tone

maybe let's refine a little bit this kind of more tweeting they would always happen but in short I would say this is actually not hard to do and I'm confident this can be done as well but nevertheless um speaking getting back to the business from at my end is I'm not fully ready yet to become the pride. Yeah. Whenever you're ready, you know, because Yeah. Whenever you're ready. Yeah. Let me know. And then hopefully he's he still needs help because he doesn't know uh anything about marketing or he's just got a lot of money and he just buys failing businesses and then Yeah. But anyway, regarding uh validating your business idea. So, so okay. So, the purpose of the call, it's a clarity call to see uh which service providers we connect you with to help you to achieve your end goal. So, in terms of service providers, what service providers do you have in mind that could assist you with validating your business idea?

Oh, I I actually don't know. I mean, what I have in mind, okay, I I actually need I share a little bit of my life situation as well because it's going to be directly impact how I could run my business. Um, I mean, right now I'm still physically in the in Berlin, Germany. Uh, maybe for maybe a bit a year more because I'm still in the process of getting German naturalization and getting the German citizenship and the passport but afterward I actually plan to move to another place uh where exactly I haven't decided yet probably Dubai uh um or probably Singapore I don't know yet but there are so many geopolitical instability in the world now so I don't know yet uh but nevertheless um the point is my uh my situation could be changed and my exposure and also my time zone with different client would also change as well. Um so uh that's is my first problem and the second thing is naturally coming with this life situation is which should be my primary uh market to address as in okay should I still focus on the Berlin market or should I focus on the German market or should be global global doesn't sounds very achievable like like just what my myself as one person taking on the whole world it sounds a bit mistake, you know. So, um this is also something I don't have full clarity on. What I could think of is um pick one of the places or maybe start with my own friends. Uh especially if they are already in a as a small business owner or in the middle part of it or they're building their own things, I try to get their uh feedback and conduct a more structured research uh and structured uh survey myself. Uh but I also don't think I have enough um base of these uh of this small business owner let alone um having this data or

analytics um challenge at the business. So this is what I am facing. So um I don't know what exact service do I need in this case and it would be great if we could discover a little bit uh together here.

Yeah. So okay so the fact that you're not sure where so at the moment you're in Berlin

and um you're going through the naturalization citizenship process, correct?

But eventually you've got your eyes you've got your eyes set on Dubai or Singapore.

So you're not so when you do move, you're not really sure like, you know, time zone wise, you know, operating hours. So maybe the first thing that you could start looking at is

I mean, you've got AI agents that do it, but anyway, you can the first thing that you may want to start looking at is possibly connecting with a virtual assistant or an agency

that can provide you with this.

I actually know a few

in Yeah, but they're based in London. I don't know where their uh virtual assistants are based,

but the companies themselves are based in London.

So, it might be worth me connecting you with them because

how can I put it? You may not need their help right now because if you're going to start off in Berlin, then you know you're able to operate within Berlin's time zone. But when you move to Dubai or Singapore, you're going Yeah. time zone wise things might change.

So um connecting with an agency that can further connect you with virtual assistants.

I think that would be your best bet. Also, when it comes to virtual assistants, you've got standard virtual assistants and then You've got uh digital I mean yeah marketing assistants. So I actually have a marketing assistant. She's amazing. So yeah. So you've got marketing assistants as well. You can either go direct to these individuals

or you can work with an agency

and yeah and then they can provide you with those individuals. If you're not happy with their work, you can say listen I'm not happy with this individual.

They'll be like no problem. We'll replace them.

Okay.

So I think yeah um Um, and in terms of like what market you should target first, I so I would I mean in terms of Berlin, Germany, how long have you lived there lived in Germany for?

A bit more than seven years. Uh, and I have also only stayed in Berlin. So I'm also uh in Berlin for more than seven years.

Uh, and yes, I have some connections here for sure. I mean I mean who wouldn't if you have stayed in the same place for this long?

Yes. I would say

so I I haven't been to Germany before. I was about to go to Berlin, funny enough, for the Berlin film festival because I used to do a bit Yeah. I used to do a bit of work in the film industry.

Um

but

I will say this. So in London, in the not even just London, in the UK, the issue we're having with AI, there is so much demand, but there's not enough supply really.

And what I Yeah. Yeah. So, I I'll explain. So, you've got you've got a lot of demand. I mean, oh my gosh, last year. So, when I have my events, I ask individuals what do they need help with?

And I not only have MW can help as a community. I have Grow with Intent as a community as well as a digital agency and I've got UK start now.

I remember.

And the amount of people who have ticked AI automation AI AI But the issue they're having when I speak to them is Michelle, there are loads of people who say they can do these things, but there isn't much in the way of proof. And one individual even suggested to me, and this could be a good uh

business idea that you may want to take. So what one individual suggested is there being some kind of trusted directory

and as it relates to AI service providers and it's not AI service providers that are just based in the UK around the world because this individual that I was speaking to,

he he wasn't specific when it came to who he wanted to work with. It was I just want the job done.

Mhm. Mhm.

So, um that's the issue right now. You've got a lot of people that'll be like, "Yeah, yeah, I can do it, but it's like where is the evidence?" If you can literally put together a list of individuals who can do it and have the evidence and then you could perhaps be that middleman connecting the individuals that want the job done with those other individuals. I mean that might be good but um yeah so that so so when it comes to where you'd like to operate

I mean I again I don't know much about Berlin Germany maybe things are there's a lot of uh demand for the other way around in Berlin Germany in Berlin it's actually a lot of supply but not that much of demand is exactly well well the UK it's it's completely And it's completely different. So, and another thing as well, I was working with a client and she sells um hair products. It's with a specific ingredient. Is it botano oil?

And apparently that is a hot topic in in the the hair and beauty space.

Anyway,

she has been selling so much on Tik Tok.

Uhhuh. Uhhuh.

That now and and she had an awful website like digital marketing. things weren't great, but her products are so good. So now she was look So she was looking to work with um an agency where they would literally take everything and automate everything using AI.

So you've got a lot of that happening now in the UK. So much.

Okay.

Yeah. So I mean when you get your BIS So yeah, so when you get your your business set up, I mean if you want me to refer individuals over to you where you could leaz communicate that that that doesn't sound like a problem. Okay.

But yeah, the UK there's a lot of that happening.

I don't know. Maybe in America,

but I know in the UK, yeah, it it's just they're just struggling to find individuals who can actually do it.

Okay.

Even with that gentleman, he did not have a budget.

I think I even I don't know if I told him like uh 200 was that 100 200 I think it was 100 to 200k.

That wasn't anything. I was reaching out to individuals. Can you do this job?

And

it was just all over the place like, "Yeah, we can do it." It's like, "Okay, so show me examples of you pretty much doing it or doing something close to it." And they didn't have it. And I was like, "I can't take this man's money and give it to you."

So yeah. So that's just um So yeah. So you may want to work in Berlin or you may want to try a couple of markets and then Yeah, you may want to try a couple of markets, but the UK, yeah, Michelle, there are individuals ready.

Yes, I do want to dig a little bit deeper into this potential client and I I I try to find a pattern here because at the end of the day, I'm I'm an analytics guy. I I I want to find a pattern here. So, could you help me understand a little bit what would be the common uh struggle they have? I mean, yes, I I heard that they they want some automation done. It's a classic use case, but to to get what done? Do you have a facility? of that.

So the Yeah. So with this, so I'll give you a bit of background and I'll let you know his pain points. So this individual he um he 20 plus years he was involved in buying and selling properties. So rundown properties, buying and selling it. He's very very wealthy now. And um so what he does is he buys failing businesses and he wants to cut costs. That's basically his pain point. How do I low lower costs? Mhm.

And um you know with most businesses at least definitely here in the UK uh staffing like staff that's like a lot of money.

So he wants to cut costs and where staffing is concerned. Mhm.

So that's why he was interested in AI and having some sort of AI um just some AI bot that would work as a marketing consultant because in doing so he wouldn't have to hire as many members of staff. Then there are some other individuals where

uh for them it's like there are how can I pull it there? So oh that's another one. So this individual he's he doesn't really know much about the businesses. He just buys failing businesses and then maybe later on sells them on. He's an entrepreneur. But then the majority of individuals that I'm coming across who need help and where AI automation is concerned they are solopreneurs.

Solopreneurs. Okay. Okay.

Yeah.

Solopreneurs. So they're one man bands.

So they've got a product and they're the ones that are doing everything but and it's doing really well, but they they want AI to send the emails and you know share the social media related posts and if someone um connects with them on Instagram, AI will then reply back to them.

So there's a lot of solopreneurs and they just want you know certain everyday tasks to be um automated.

Okay. Okay. That is uh one another use case for influencer or marketing purpose to automate this kind of a reply with social media. Uh yeah, emails.

Emails.

Yeah. Like um what was the what did that lady say?

When people purchase,

you know, there'll be something that will go out to them, let them know, hey, you can join our list. And then the mailing list. Then also when it comes to mailing list, they basically want different types of lists. So for example, if someone has just joined, this particular email will go out to them. Oh yeah.

If someone has been on the mailing list for a while, this particular email list will go out to them.

But yeah, so that's what I'm I'm finding here in in um the UK, they want they want to save money and they want to save so the the bigger folks, they want to save money because they have more money. No. Yeah. More money than time. So, they want to basically save money and save time. That's the main reason for AI.

Yeah. Makes total sense.

Great. Uh that that is another CRM case you just mentioned and I also know how to do that.

And uh and that's do you see what are the major pattern are there for the potential client?

Major what what are the major pattern?

So we just discussed um the the first client that who buy and sell business by failing business and try to reduce the cost by you by implementing AI. That's the first case.

And yeah,
and another pattern is those e-commerce businesses. So people who are actually selling products.

Mhm.

Yeah. Okay. There's a couple where
you know after a year they do really well in sales
and they just want everything automated. You'll find a lot of them on Tik Tok.

Oh wow. Okay.

In the UK a lot of them you know what if I if I were doing what you were doing, which I wouldn't do cuz not I'm not really passionate about AI, so I would never be a competitor of yours. But what it is, if I was in your shoes, I would go and check out the different companies that are on Tik Tok that are selling things that are doing relatively well.

Not the ones that are booming, you know, the ones that have a bit of a following, maybe 5K followers.

Okay?

I would approach those individuals because it's those individuals that are on the verge of okay, if we don't get AI
and if we don't incorporate AI into our workflow, our business will collapse.
So, it's those individuals. Um, I worked with someone who sells dog food, they need AI. Um, I worked with someone with the botano oil, they need AI,
AI, AI, AI.

Yeah.

Okay. Okay. That's
so product based businesses.

All right. All right. Good. And uh Just just also just FYI because as a guy coming from Hong Kong, I'm always very cautious about any China based ever, especially Tik Tok.

Yeah. Wait, do does Hong Kong and cuz you know my next door neighbor. He was So he was born in China. He's he's like a he's he's white but he's mixed. But anyway, he was born in Shanghai, then he got kicked out of Shanghai, then he moved to Yeah. This was like he's 80 years old. He's very wealthy. And then he basically um moved to Hong Kong when he was 9 10 and he's lived there all his life and he said that I think Hong Kong and China they don't get along.

Yes, exactly. And my point is I'm very very cautious about using any China apps especially Tik Tok in ter in the consideration of for privacy and um because I'm

100% sure the the the China government also also US as well they are doing mass surveillance of us that's for sure.

Ah So anyway, it's just another data stuff, you know.

Uh um but yeah, it's a good uh business tip here. Thank you again.

Yeah.

Okay, that's a that's a Okay, that's a tough nut, man.

So, you want to avoid uh Tik Tok?

No, I mean I I could I could try different ways to bypass it. For example, I could I could get a separate phone uh that install nothing else but just Tik Tok just to find this business. It's also doable. So yeah.

Yeah. Doable. Uh yeah.

Yeah. So

good. Okay. Good. There's some good notion here.

Yeah. Cool. But he literally e e Yeah. So e-commerce and then target those individuals with what I will say as well one more thing with that individual that so what I've noticed is

with high netw worth individuals

they do not put everything on their LinkedIn profile.

That's for sure.

Yeah. So with this individual All you'll see is he basically so in in the UK we have an expression flipping homes.

Do you understand what I mean by that?

I think I do actually. I think

yeah. So you just buy a home, redo it, sell it on. So he just has that, you know, he's done this for 20 plus years. So because he's got that experience, that's why he's in the business of let me buy failing businesses

and get making a profit again and then sell it onto someone else.

So you may So when you're targeting, so if you want to bypass Tik Tok for now, you may want to use LinkedIn Sales Navigator. I can give you two months free trial.

Oh wow.

Cuz my Yeah. Let me just write that down. When it cuz I've got the I've got LinkedIn Sales Navigator already

and when you have it, you can gift people uh two months free trial in depending on the country you're in. I think uh Germany is fine. so I can gift it to you. So, let me I'm going to um send you I'll send it to you via email. But what did I want to

say on So, if I were you, I would target individuals on LinkedIn who have some kind of uh what's the word? Real estate background. Real estate.

Okay.

Because I'm finding that those individuals when they're in when they get a taste of the house flipping, you know, purchase something that's run down, fix it up, up, sell it on for more money.

Those individuals are more likely to be entrepreneurs.

Those entrepreneurs, they're all about lowering costs. You know, that's the the main reason why those businesses went bust. Those businesses that they've pretty much purchased, their costs are too great. So, those individuals are more likely to want to work with someone who understands AI and can use AI to lower their costs. And yeah, LinkedIn Sales Navigator and I will give you this tip as well. Um, if you want to if you want to be able to reach more people on LinkedIn,

reach connect with those individuals who are already connected to a lot of individuals

and ideally connect with community managers

because the more community manager you connect with,

it means the pool of people that you're able to find on LinkedIn will be greater.

So yeah, so we're already connected. So you so with LinkedIn Sales Navigator you can connect to all of the people that I'm connected with.

Okay, that's great. That's great.

First of all, I'm impressed how resourceful are you you are and second is um second is more insight from from me uh dear in this um age of AI because um it's actually a quote coming from the the one of the founder of of uh and entropic by the company behind um behind claw code and they said um the problem of building as in coding is already solved it. Uh the primary problem for the for the world now is actually distribution as in you if you have a product uh how do you get it to who actually would buy it and I think um this is one of the uh effective solution uh getting to the community and uh knowing who knows um who knows someone and uh this is definitely one of the key answer to this era I would say.

Yeah. No. Yeah. And community I I've said to people I've said this to people since The future of marketing is going to be communitydriven. But when I say communitydriven, I mean hybrid communitydriven. So those communities that

meet up with their members both on an inperson online basis. It's not just social media.

The more community managers you reach out to, the better. I know another guy, his name is Damian. He is the community manager and founder of Productivity Beers in London. Mhm.

Um, they have startup entrepreneurs.

I mean, I don't know, maybe you'd like to get have a chat with him and you know, ask him some questions because I work with a lot of small business owners. He works with startups.

Sounds good. That would be and he's very responsive. So, I'll do that um a bit later. Y

Damian and Jimmy, any more questions?

Um, more a remarks for you is uh I think from my end while I have technical capability and AI and data and so on. I think I realize what I lack uh if I want to build my own business is actually someone who is good at marketing who is good at dist the distribution problem I just mentioned and especially for uh influencer or Tik Tok or IG whatsoever I think that would be a great uh complimentary to what I have um I don't know if it's going to be in the form of a of a of a agency as you brought up earlier in the section or is going to to be a co co-founder or any other collaboration form? I I don't know yet, but I'm going to put this out in the air.

And yeah, I mean, if you need any help where marketing is concerned, you know, Michelle, like we know each other. Um, like I said, I'm fully booked up until January 2027 because we've got, yeah, a couple of clients. So, our thing is we want to get the results for them

and then, yeah, we're going to take on another match of people and so forth.

Um, but like I said, I'll connect you with Damian as well and I'm sure Damian knows some individuals who, you know, are very good and where marketing is concerned. There's another lady as well. Her name is, I think her name is Tanya. She also has a startup network. These two individuals are also members of my community. That's how I know them.

Oh, great.

Yeah.

Cool. Yeah, we're running. I don't want to take more of your time. We probably have afterward.

No worries. But it was lovely speaking to you. So yes, what I'm going to do, I'm

going to send you the code for the two months free uh LinkedIn sales navigator and I'm going to connect you with Damian on LinkedIn right now. The only thing is

I'm not sure if like I don't know if he's Chinese or I think he might be mixed.

Okay. I mean

what I will do I don't know if he's half ch So what I will do I will take his uh profile photo and send it to you and then you let me know if you're happy to connect because I don't know his connections with China but I don't think he's Chinese. He's half. Yeah, you'll you'll see him anyway.

Okay, let's see. Let's see.

Yeah. So, yeah. All right then. It was lovely speaking to you, Jimmy. Take care.

Yep. Take care as well. Bye-bye.

Bye.

Bye.
